1.Product introduction

The Texas Five Star Target (gravity rotation) does not require the use of auxiliary tools and can be quickly installed. The target is made of various types of pistol shooting materials, with a flexible central axis and rolling and swinging conditions that vary according to the shooting interval and the head shot down. It has good tactical training effects and no usage failure rate.

A tactical target is a dynamic target material, consisting of multiple target disks mounted on a rotating shaft.

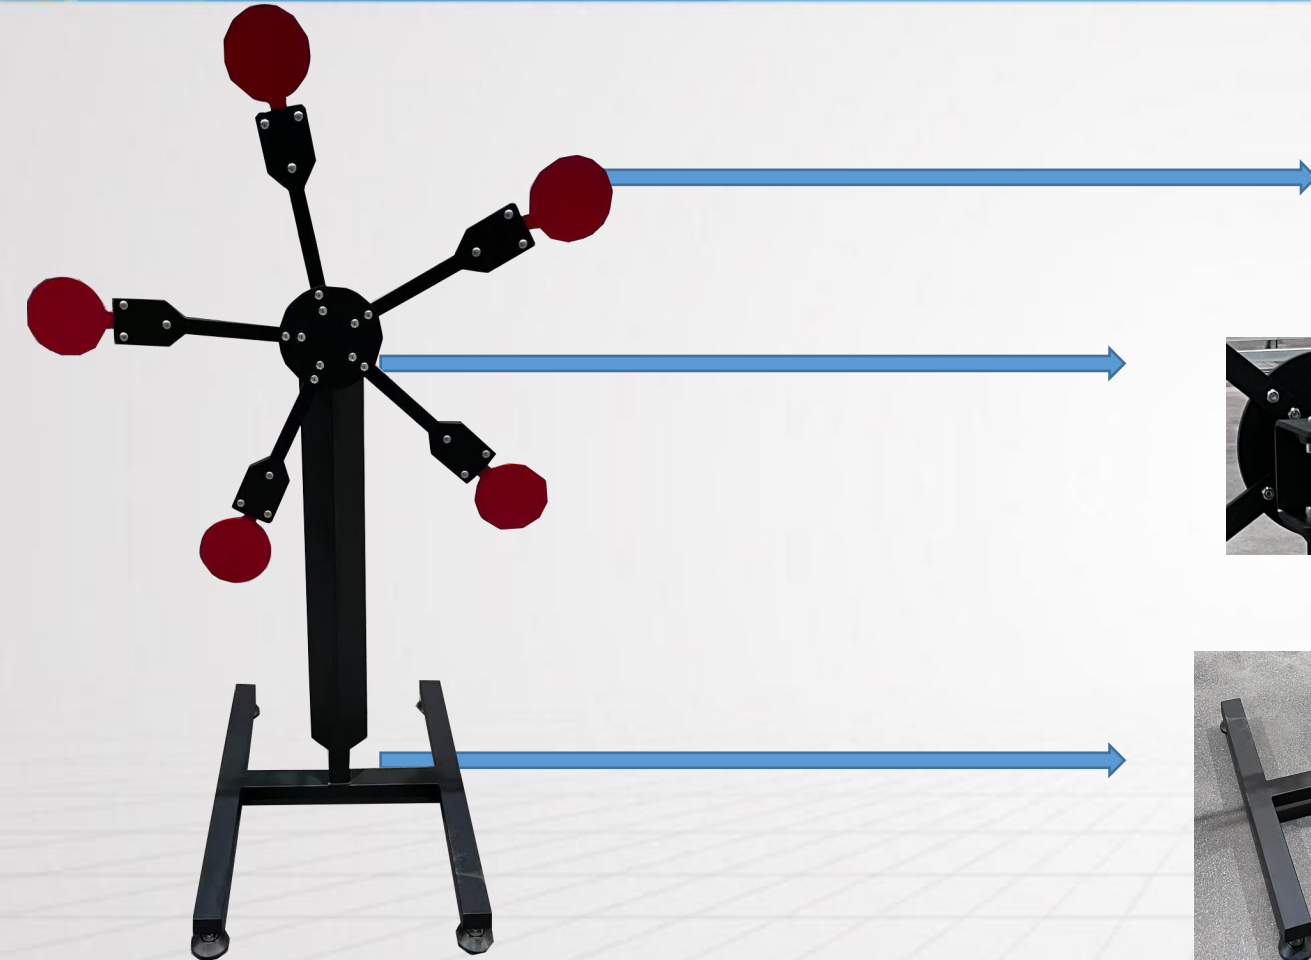

After hitting the target, the windmill will quickly rotate, increasing the difficulty of shooting, making it very suitable for improving shooting skills and reaction ability.

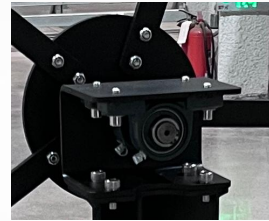

FNY-ZS-D6

2 . Product composition

The target plate is made of NP550 8mm bulletproof steel plate, which is durable, not easy to deform, not easy to rust, and resistant to impact within the normal temperature and pressure range, with stable performance;

Adopting outer spherical bearings, the central axis can roll flexibly, with high-speed, silent and durable wear resistance, ensuring the normal operation of the target.

The target base is made of carbon steel material, which is wear-resistant and rust resistant. It can maintain good stability when the target plate is impacted by bullets.

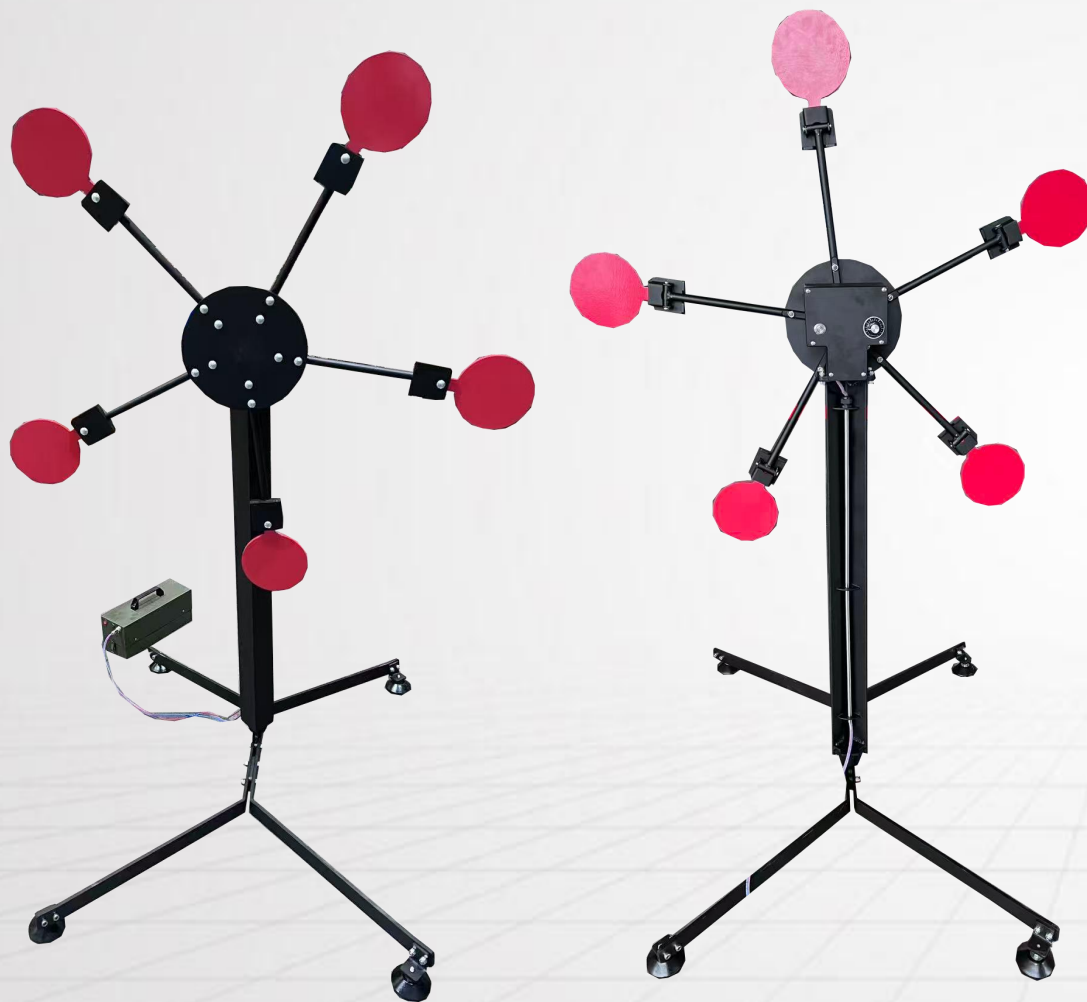

3.Product parameters

No.	Item	Index
1	Texas Five Star Target (gravity rotation) Size	1100mm*1050mm*1760mm
2	Weight	34KG
3	Material	steel
4	Target plate material	Bulletproof steel plate
5	Target plate size	150mm*220mm
6	Wind resistance	Level 6
7	Applicable temperature	-50°C ~ +80°C

1.Product introduction

FNY-ZS-D6B

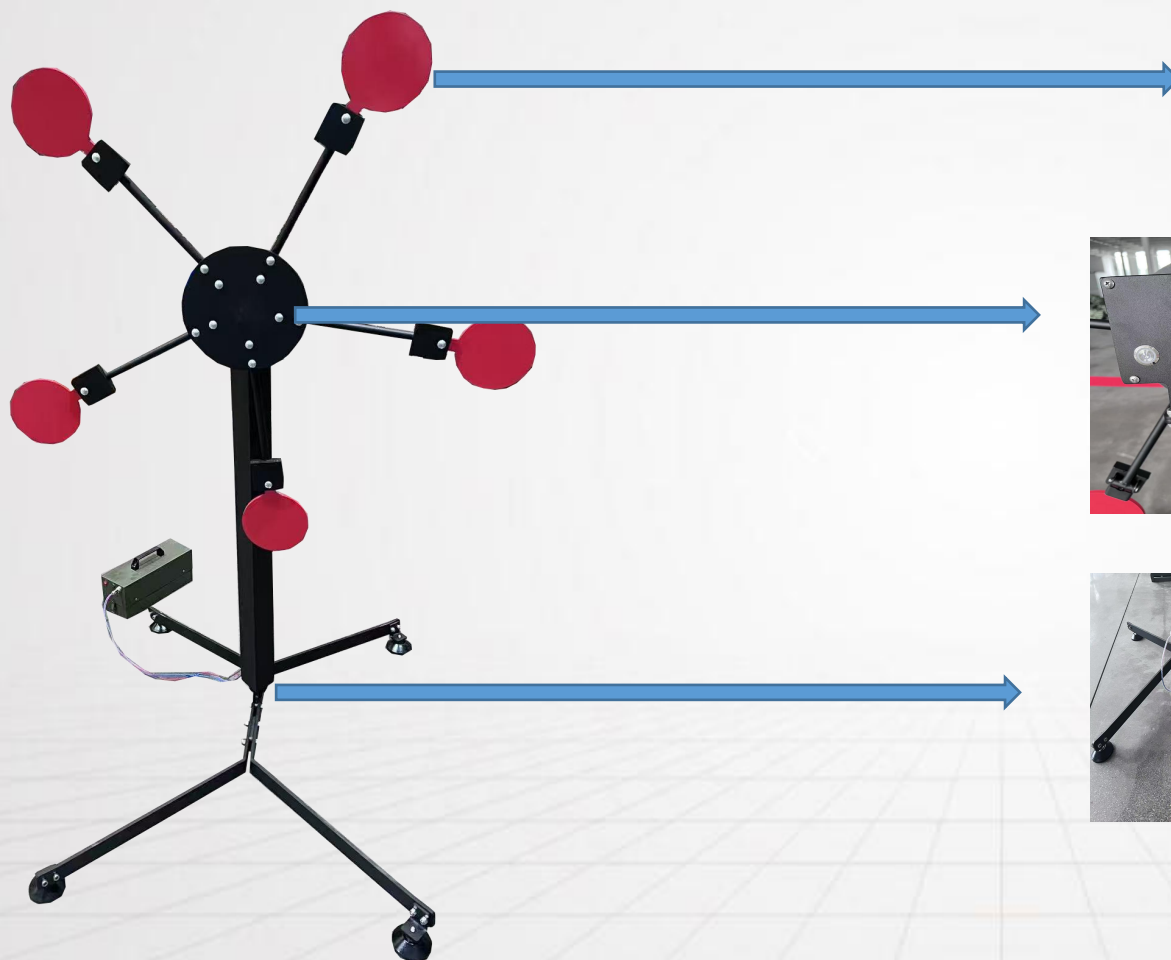

The Texas Five Star Target (motor rotation) is a newly developed tactical target by our company. It can rotate freely with five-level variable speed, capable of simulating complex scenarios and enhancing the shooter's adaptability. The target automatically resets after being hit.

Using high-performance bulletproof steel, its hardness and toughness far exceed industry standards.

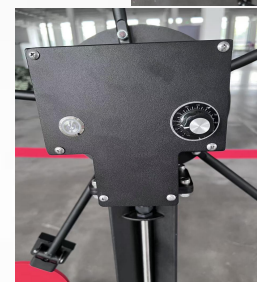

The steel plate has high flatness, ensuring smooth rotation of the target disc and reducing abnormal wear. It supports multiple target disc sizes and rotation speeds, meeting different training needs.

2 . Product composition

It is made of NP550 8mm bulletproof steel plate, featuring stable target performance and strong durability. It can withstand multiple shots. After being hit by bullets, the target will automatically reset, simulating complex scenarios and enhancing the shooter's ability to respond.

It can adjust to five levels of speed and multiple gears, elevating traditional static shooting to a dynamic challenge, thereby honing the shooter's adaptability to complex battlefield environments.

The base is made of carbon steel, which is stable and wear-resistant. The battery is a 24V high-efficiency and long-lasting one, capable of working continuously for over 8 hours.

3.Product parameters

No.	Item	Index
1	Texas Five Star Target (motor rotation)	1100mm*1050mm*1760mm
2	Weight	31.5KG
3	Material	Steel products
4	Target material	Bulletproof steel plate
5	Target size	150mm*220mm
6	Voltage	24V
7	Wind resistance	Level 6
8	Temperature	-30°C ~ +65°C
9	Working hour	> 8 hours

1.Product introduction

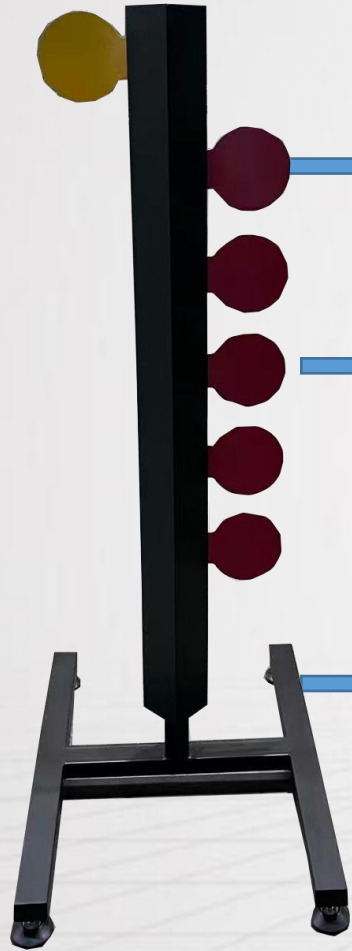

FNY-ZS-D5

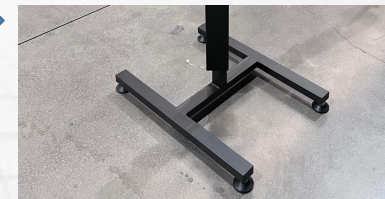

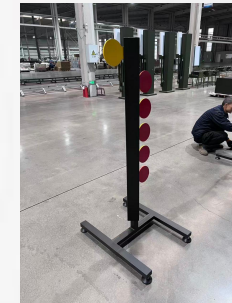

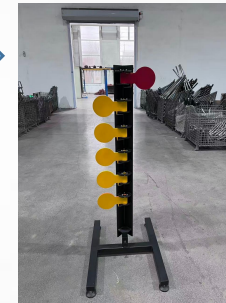

The tree shaped steel plate target has six steel plates. When hit, it will rotate to the other side and can achieve all-weather shooting. Used for shooting training applications, the main material uses a pure steel structure mechanical target, simulating a head shaped target behind a tree. The target turns to the other side under the impact of a projectile and shoots the other side again. It can be reused without consumables. Suitable for complex training, multiple objectives can be selected simultaneously Can change shape and flexibly adjust.

2 . Product composition

The target plate is made of NP550 8mm bulletproof steel plate and will rotate to the other side when impacted by a bullet. Simulate the head shaped target behind the building behind the tree.

Made of carbon steel, the base is stable and reliable, which can keep steady when the target is impacted.

3.Product parameters

No.	Item	Index
1	Tree shaped steel plate	1060mm*860mm*1340mm
2	Weight	26.5KG
3	Material	Steel products
4	Target material	Bulletproof steel plate
5	Target size	150mm*220mm
6	Wind resistance capability	Level 6
7	Applicable temperature	-50°C ~ +80°C

1.Product introduction

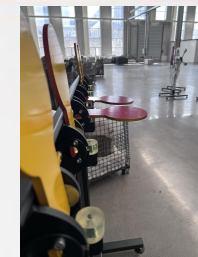

FNY-ZS-001

The six headed steel plate target is a pure mechanical target without any electrical appliances. It can be used in different environments and is not affected by various factors such as power supply, magnetic field, time, etc. It does not require the use of auxiliary tools and can quickly install the target head. The overall material of the target is resistant to various types of handgun shooting. The central axis is flexible, and the rolling and swinging changes according to the shooting time and the target head shot down. The display and hiding time is manually controlled to train the shooter's reaction ability, improve shooting level, and achieve good tactical training effect with no failure rate.

2 . Product composition

The target is made of 8mm NP558 bulletproof steel plate, which is impact-resistant and stable under normal temperature and pressure.

The base of the target is made of carbon steel, which is stable and reliable, not easy to rust, and can be well stabilized when impacted

3.Product parameters

No.	Item	Index
1	Six head steel plate target size	1190mm*1090mm*1490mm
2	Weight	47.5KG
3	Material	Steel products
4	Target material	Bulletproof steel plate
5	Target size	150mm*220mm
6	Wind resistance capability	Level 6
7	Applicable temperature	-50℃ ~ +80℃

FNY-ZS-D7-5

The human shaped target is a tactical target developed by our company to simulate actual combat scenarios, providing a more realistic and targeted experience for shooting training. It is an important shooting tool for improving shooting skills.

The target is very suitable for indoor and outdoor training. Placed behind low walls and other shelters at the corners of the venue, it automatically returns to its original position when the target is hit, and can be reused with strong stability.

3.Product parameters

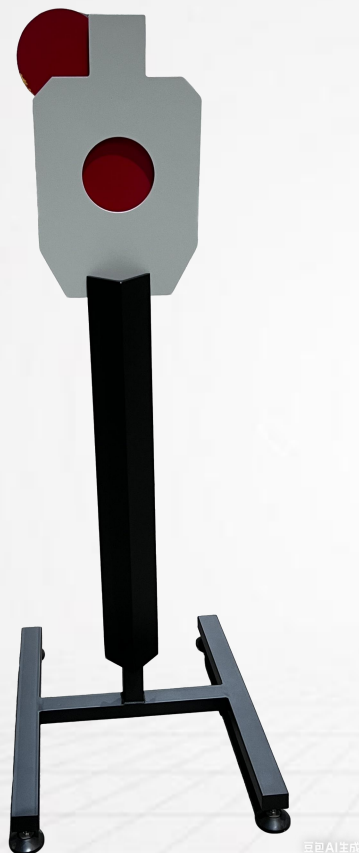

No.	Item	Index
1	Human shaped target size	620mm*640mm*760mm
2	Weight	15KG
3	Material	Steel
4	Target paddle material	Bulletproof steel plate
5	Target paddle size	660mm*190mm
6	Wind resistance capability	Level 6
7	Applicable temperature	-50℃ ~ +80℃

1. Product introduction

FNY-ZS-D1

FNY-ZS-D14B

Reactive steel target is a tactical target developed by our company to simulate actual combat scenarios.

There are two paddles that can quickly rotate forward and backward, and a simulated hostage taking device provides more targeted training for

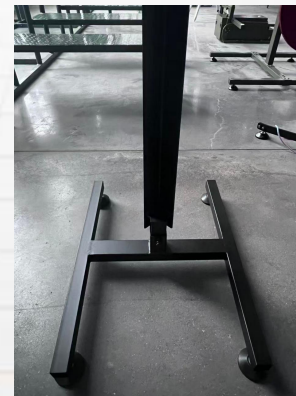

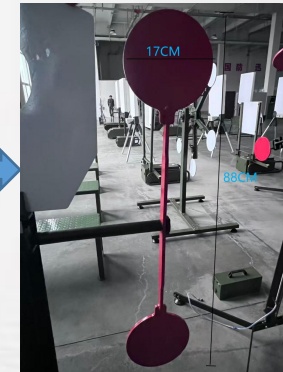

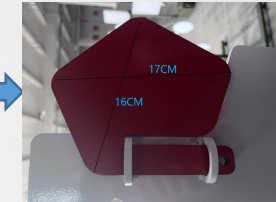

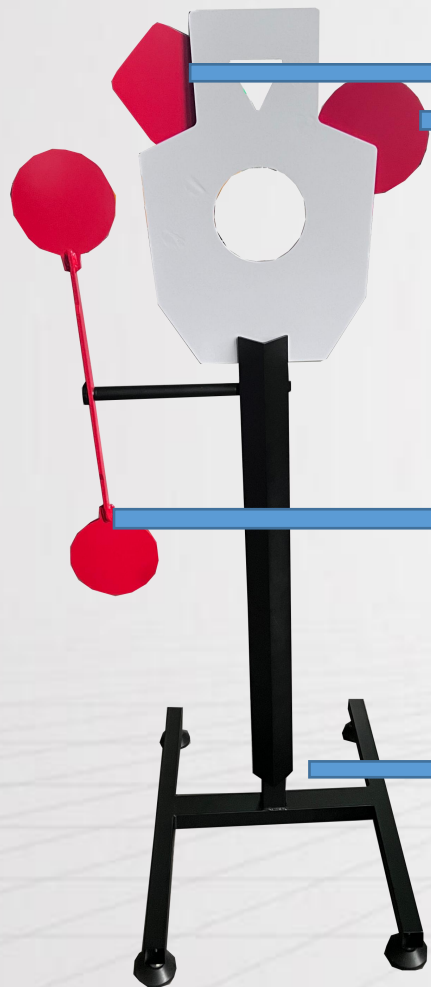

shooters. The target paddles use high-performance bulletproof steel plates, which can withstand multiple shots and be reused.

The target body is made of carbon steel, which can keep steady when

target is hit. The reactive steel plate target transmits the bullet impact force to the target plate, triggering preset mechanical movements (such as rotation, swinging, flipping, or dropping) while providing auditory feedback (a crisp "ding" sound) and visual feedback (target plate movement), allowing the shooter to immediately confirm the hit.

5	Wind resistance capability	Level 6
6	Applicable temperature	-50°C ~ +80°C

1. Product introduction

FNY-ZS-D16

FNY-ZS-D16B

The chain target is a metal shooting target developed by our company, mounted via a suspension system. With its real-time auditory feedback, exceptional durability, and dynamic responsiveness, it is widely used in military-police tactical training, hunting exercises, and competitive shooting events, serving as a core tool for enhancing shooting skills. The chain target consists of three components: the main target plate, suspension system, and support structure. Its working principle involves the kinetic energy of a bullet striking the target plate being partially absorbed by the suspension system, causing the plate to swing or rotate. Simultaneously, the metal impact generates audible feedback, allowing the shooter to confirm the hit without approaching. The suspension design enables natural deflection of the target plate, directing shrapnel and debris to the ground, thereby enhancing safety.
